## **Pennsylvania Ready to Provide COVID-19 Booster Shots Upon CDC Authorization**

**Hershey, PA** - Acting Secretary of Health Alison Beam today signed an order to ensure that vaccine providers are prepared to start COVID-19 booster shots as soon as the Centers for Disease Control and Prevention (CDC) issues the necessary federal guidance.

“Pennsylvania is well prepared to start providing vaccine booster shots just as soon as the CDC provides the approval and guidelines on who can get it,” Beam said during a news conference at the Hershey Pharmacy. “Vaccine providers — especially pharmacies — have already done a tremendous job administering more than 12 million vaccines across the state. Now they are ready to get booster shots to people as quickly and efficiently as possible.”

The CDC’s Advisory Committee on Immunization Practices (ACIP) is scheduled to discuss boosters on Sept. 22 and 23 and is expected to make recommendations and provide guidance to vaccine providers following the meeting.

The [Department of Health’s order](#) requires vaccine providers, as possible, to:

- provide online scheduling for vaccination appointments,
- provide a telephone number, with prompts to a live agent during normal business hours, to assist in scheduling appointments,
- offer walk-in appointments, and
- work with local Area Agencies on Aging (AAA) and Medical Assistance Managed Care Organizations (MCO) to help schedule eligible adults and people who cannot leave their homes.

“COVID-19 vaccines do work,” Hershey Pharmacy Owner and Pharmacist Chuck Kray said. “They are safe and highly effective at preventing serious illness. We are seeing the highly contagious Delta variant and it is sending case numbers soaring throughout our area. Getting the vaccines and the booster shot will protect not only you, but your loved ones during this spike.”

“Our team is still administering about 100 shots per week in Hershey Pharmacy and at area nursing facilities, clinics and schools,” Kray said. “We are ready to begin

administering the boosters as soon as the federal government gives us the go ahead and guidelines. Please, do your part and get vaccinated in this fight to end the pandemic.”

There are currently more than 2,000 vaccine providers across the state with COVID-19 vaccine inventory. To date, vaccine providers have administered 12.6 million total vaccine doses. More than 6.1 million Pennsylvanians are fully vaccinated; with a seven-day moving average of more than 15,600 people per day receiving vaccinations.

“The data is abundantly clear that COVID-19 vaccines are safe and effective at preventing hospitalization and death,” said Acting Physician General Dr. Denise Johnson. “We continue to urge every eligible person to get the vaccine, not only for themselves, but to protect their family and loved ones, especially kids under 12 who are too young to get the vaccine, which is in plentiful supply across the state.”

Last week, the [Pennsylvania Department of Health announced](#) that, since January 2021, 97 percent of COVID-19-related deaths and 95 percent of reported hospitalizations due to COVID-19 were in unvaccinated or not fully vaccinated people.
